

BRAINLAB FACT SHEET

Brainlab, headquartered in Munich, develops, manufactures and markets software-driven medical technology, enabling access to advanced, less invasive patient treatments. Core products center on image guided surgery, radiosurgery, precision radiation therapy, digital operating room integration, and information and knowledge exchange. Brainlab technology powers treatments in radiosurgery and radiotherapy as well as numerous surgical fields including neurosurgery, orthopedic, ENT, CMF, spine and trauma.

The company is also investing extensively to develop the operating room of the future including surgical workflows with integrated spatial computing. The technology aims to redefine how surgeons and other clinicians visualize and access medical imaging data while transforming the art and science of patient care.

Privately held since its formation in Munich, Germany in 1989, Brainlab has more than 12,300 systems installed in over 100 countries. Brainlab employs 1,350 people in 18 offices worldwide, including 420 Research & Development engineers, who form a crucial part of the product development team.
